AI BLOGNEST API

Code-Layout, Readability and Reusability

Folder structure and maintainability

TEAM ID	SWTID 2026-5569

DATE	30 September 2026

Observed layout

src/config/, src/controllers/, src/middleware/, src/models/, src/routes/, src/services/, src/app.js, src/server.js; root also shows .env, .gitignore, package.json/lock, README, and Thunder Client collection/environment files.

Separation

The observed structure separates configuration, route handlers, middleware, data models, route mapping, and external AI service logic.

Maintainability practices

Keep route definitions concise, validate request bodies at boundaries, centralize error handling, and isolate Gemini calls in service functions.

Security and review

Keep .env private; protect account-specific operations; validate blog IDs and user ownership. Detailed source files were not included in the latest message, so these are review guidance rather than a code audit.
