DATE	30 September 2026

Context

Client/Thunder Client -> Express routes/controllers -> MongoDB via Mongoose for users and blogs. AI controller/service -> Google Gemini -> generated draft or summary returned to client.

Authentication

Registration/login inputs pass through auth routes/controllers; user information is persisted; successful authentication returns a JWT. Protected operations use token middleware and user context.

Blog flow

Client sends blog fields -> route/controller validates and processes request -> Mongoose persists/retrieves blog document -> JSON response.

AI flow

Client sends topic/category or content -> AI route/controller -> Gemini service calls configured model -> generated blog text or summary returned as JSON.

Configuration

Database URI, JWT secret, and Gemini API key belong in private environment variables. Do not publish credential values or include .env in a shared package.
