Problem

Blog creators need a reliable service to manage posts and an AI-assisted way to draft or condense content.

Problem statements

• As a user, I need to register and log in so blog operations can be tied to my account.

• As an authenticated user, I need to create and manage blog posts with title, content, and category.

• As a reader or client, I need to retrieve blog posts.

• As a writer, I need AI to generate a draft from a topic/category and summarize supplied content.

Scope boundary

The project is documented as a REST API. User-facing page design and public deployment were not provided.

Evidence

Earlier shared API screenshots show successful register, login, profile, blog create/list, AI generation, and summarization responses. They are evidence for those depicted cases only.
