Manage blog content

Blog CRUD API operations provide a backend workflow to create and maintain posts.

Organize posts

Category fields support grouping and describing blog content.

Draft faster

Gemini blog generation accepts a topic and category; a shared request returned a generated title/content response.

Condense content

Gemini summarization accepts text content and returns a summary; a shared request returned HTTP 200.

Evidence boundary

Screenshots support example local success cases. They do not measure user satisfaction or validate product-market fit.
