Overview

Build a modular REST API with user authentication, MongoDB-backed blog operations, and two Gemini-powered content tools.

Modules indicated by folder structure

• config: database setup.

• controllers: request handling for authentication, blogs, and AI.

• middleware: authentication and shared request handling.

• models: Mongoose data schemas.

• routes: REST endpoint definitions.

• services: Gemini integration.

• app.js and server.js: Express configuration and startup.

Main flows

Authenticate -> manage blog posts -> request AI generation or summarization. Return generated content as JSON.

Out of scope

A browser/mobile UI, publishing platform, role-based editorial approvals, and deployment details were not shown.
