DATE	30 September 2026

Current foundation

Layered source structure separates controllers, routes, models, middleware, configuration, and AI services.

Near-term

• Add automated tests for all CRUD, authorization, validation, and AI failure paths.

• Add pagination and indexes for growing blog collections.

• Apply request-size limits and AI rate limits.

• Add timeouts, retries, and clear error handling for Gemini calls.

• Add logging and monitoring for response times and failures.

Potential extensions

Frontend editor, drafts, tags, rich text, version history, scheduled publishing, search indexing, and user feedback on generated content.

Safety and quality

Review generated content for accuracy, originality, and suitability before publication; protect credentials and user data.

Boundary

These are proposed improvements, not features confirmed in the supplied project context.
