AI BLOGNEST API

Solution Architecture

Layered backend structure

TEAM ID	SWTID 2026-5569
TEAM SIZE	5
TEAM	Nithesh D (Leader); Madhan P; Poovrasan K; Duraisamy M; Praveen Kumar R
DATE	30 September 2026

Layers

Client/Thunder Client -> Express app -> routes -> middleware/controllers -> Mongoose models -> MongoDB. AI requests pass from controllers/services to Google Gemini.

Blog request sequence

POST /api/blogs -> route and applicable auth middleware -> controller -> Mongoose create -> JSON response; GET /api/blogs -> controller query -> JSON list.

AI request sequence

POST /api/ai/generate-blog or /api/ai/summarize -> controller/service -> Gemini API -> generated text in response.

Startup

The screenshot shows src/app.js and src/server.js in the project root under src. Environment settings are kept in .env locally.

Operational dependency

AI features require a valid Gemini key and network access. Database-backed operations require a reachable MongoDB instance.
