2. Introduction

AI BlogNest API is a simple backend project for a blogging application. It allows users to create and manage blog posts through APIs. The project also supports AI features for helping users create blog content.

3. Objective

Create a simple blog API, store blog data in MongoDB, provide user and blog management, use AI to assist in blog content creation, and test APIs using Postman or Thunder Client.

4. Technologies Used

Node.js – Backend runtime
Express.js – API development
MongoDB Atlas – Database
Mongoose – MongoDB connection
Google Gemini API – AI features
Postman / Thunder Client – API testing

5. Main Features

User registration and login
Create, view, update and delete blog posts
AI-assisted blog content generation
MongoDB database storage

6. Project Structure

```
AI-BlogNest-API
■■■ src
■   ■■■ config
■   ■■■ controllers
■   ■■■ middleware
```

```
■   ■■■ models
■   ■■■ routes
■   ■■■ services
■   ■■■ app.js
■   ■■■ server.js
■■■ .env
■■■ package.json
■■■ README.md
```

7. Database

MongoDB Atlas is used to store user and blog information. Common data includes user name, email, blog title, blog content, author and timestamps.

8. API Examples

POST /api/auth/register – Register user
POST /api/auth/login – Login user
GET /api/posts – View all posts
POST /api/posts – Create post
PUT /api/posts/:id – Update post
DELETE /api/posts/:id – Delete post

9. Conclusion

AI BlogNest API is a simple and useful backend project for an AI-supported blogging system. It uses Node.js, Express.js and MongoDB, with Gemini API support for AI features. The project can be extended later with a frontend, comments, likes and search.
